Champ SG100

The only "female hand" scanner

This unique CCD or Laser scanner sets the standard for "female hand" scanning. With "female hand" scanning it is meant that the shape is especially made for female hands, which are in general smaller than male hands. This shape has been chosen because of the fact that most cashiers are female. Next to this great design with even the feedback LED shaped as a heart, the price/quality aspect is fantastic. The SG100 has a scan rate of 135 scans per second and a reading distance of up to 17 cm. It supports the most commonly used linear barcodes and has a triple interface (RS232, KBW and USB).
